

Table S7. Measures of perceived AI response quality and interaction quality.

Items	Response
<i>AI response perception</i> What do you think about ChatGPT's responses using the scale below?	1. Generic - In-depth 2. Rich information - Lack of information (R) 3. Accurate - Inaccurate (R) 4. Strong reasoning - Poor reasoning (R) 5. Easy to understand - Hard to understand (R) 6. Too detailed - Too short (R) 7. Irrelevant - Relevant 8. Useful - Useless (R) 9. Complete - Incomplete (R) 10. Biased - Unbiased 11. Clear - Ambiguous (R) 12. Outdated - Up-to-date
<i>AI interaction perception</i> To what extent do you agree or disagree with the following statements? (1 = strongly disagree, 7 = strongly agree)	1. In this conversation, ChatGPT's responses did not follow my instructions. (R) 2. In this conversation, ChatGPT made up information that couldn't be verified from reliable sources. (R) 3. In this conversation, ChatGPT agreed with my opinion too much. (R) 4. In this conversation, ChatGPT's responses included unlawful, unethical, harmful, or biased content. (R) 5. In this conversation, ChatGPT was able to understand my questions and instructions clearly. 6. Overall, I am satisfied with the quality of this conversation with ChatGPT. 7. I would like to use ChatGPT again for similar tasks.

Table S8. Measures of AI perceptions in terms of perceived likability, trustworthiness, and intelligence.

Dimensions	Items
Perceived likability	1. Not likable - Likable 2. Unpleasant - Pleasant 3. Unappealing - Appealing 4. Irritating - Not irritating
Perceived trustworthiness	5. Not credible - Credible 6. Untrustworthy - Trustworthy 7. Dishonest - Honest 8. Unreliable - Reliable 9. Biased - Unbiased 10. Insincere - Sincere
Perceived intelligence	11. Unintelligent - Intelligent 12. Dumb - Smart 13. Incapable - Capable
